

# Advanced Spinal Decompression

for relief of pain from  
bulging discs, pinched sciatic nerves  
and damaged spinal joints

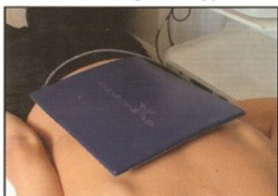

## Setting a New Standard...

The **Dynatron DX1\* Decompression System** has revolutionized the treatment of back pain by combining the benefits of Decompression and Light Therapy into one simple-to-administer treatment.

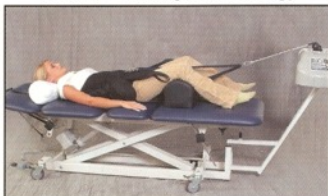

Phase I consists of a 4-7 minute unattended Light Therapy treatment using the new **Dynatron XP\*** Light Pad. By pre-treating with Light Therapy prior to beginning Decompression, the patient benefits from relaxation of muscle spasms, increased circulation, and relief of minor muscle and joint aches.

Following Light Therapy, Phase II consists of decompressing the intervertebral discs relieving pressure on structures that may be causing low back pain.

*Phase I - Light Therapy\*\**

*Phase II - Decompression Therapy*

\* Patent Pending

\*\* Light Therapy has been cleared by the FDA for the relaxation of muscles and muscle spasms and for the temporary relief of pain, stiffness, and minor muscle and joint aches.

## Decompression is indicated for a number of conditions

The **Dynatron DX1 Decompression System** has been cleared by the FDA to relieve pressure on structures that may be causing low back pain. It relieves pain associated with herniated discs, protruding discs, degenerative disc disease, posterior facet syndrome, and sciatica. These benefits are achieved through the decompression of intervertebral discs.
